

## Design / Development Support

# Protocol area

We support to design of 'Protocol area ( air interface and data communication)'. Specially, we have knowhow of regarding the Qualcomm chipset more than the other chipset.

### Service area

- 1) To provide total support for radio communication and data communication.
- 2) Have specific knowledge for 'System Determination' such as Multi GEO in North America.
- 3) Have several technical experts in the GSM arena.

### Support work

- 1) Merge operation for software from chipset vendor.
- 2) Investigation and correction for the problems from the market.
- 3) Process development for the software production.
- 4) To perform different stages of the test: Conformance test ~ Product release test ~ Quality verification test.
- 5) To perform JATE test , TELEC support.
